

AMENDMENTS TO THE ABSTRACT

Please cancel the Abstract section of the specification and substitute the following:

A footrest plate has a footrest side and a rear side. The rear side includes a pair of clips fixedly received in rectangular shaped mounting holes of a workpiece. The clips have a defined spacing therebetween in a longitudinal direction of the footrest plate and a rectangular cross-sectional insertion portion insertable into the mounting holes. The rear side includes a reference protrusion at an intermediate position between the clips having a defined distance to the clips in the longitudinal direction. The reference protrusion is inserted into a workpiece reference hole. The reference protrusion includes a rectangular cross-section defining a pair of lateral sides each extending in a lateral direction transverse to the longitudinal direction, and a length in the lateral direction greater than each lateral side of the clips.
